Subject: Designation of the Warner River to the State Rivers Management and Protection Program

Dear Ms. Sales,

I am writing in support of the Warner River becoming a "designated river" per RSA 483. This section flows from the confluence of the West Branch Warner River and Andrew Brook in Bradford downstream to its confluence with the Contoocook River. This water body provides habitat for a variety of species and two-thirds of its tributaries are home to native brook trout. The river corridor is host to several rare, threatened, and endangered plant and animal species. Significant areas of high quality habitat can also be found along the Warner River, as defined in the New Hampshire Wildlife Action Plan.

In addition to natural habitat, the Warner River provides residents of the communities of Bradford, Warner, Sutton, Webster, and Hopkinton recreational opportunities and has been a focal point within these communities for centuries. There are a number of sites listed on the National Register of Historic Places including three covered bridges. There is still historical evidence of once thriving mill communities in the river and on its banks.

The establishment of a Local River Management Advisory Committee would be hugely beneficial to the preservation of the Warner River's many valuable resources and services. Induction of the Warner River into the New Hampshire RMPP would also elevate the awareness of the river and lead to the creation of an inter-municipal forum where residents, business owners, and other various stakeholders can discuss and address river-related issues to balance the needs of many who enjoy the countless uses of the Warner River.

The Hopkinton Conservation Commission is please to support the designation of the Warner River into this important program.

Sincerely,

Lee Wilder, Chair

Conservation Commission
